

Hospital Management System - Progress Summary

1. Set up complete project structure with Express, MongoDB (Mongoose), and static HTML.
2. Implemented Admin features:
 - Add Patient
 - Add Doctor
 - Add Appointment
 - View Patients, View Doctors, View Appointments
3. Implemented Patient features:
 - Patient Dashboard showing appointments
 - Explain Problem with image upload (Multer)
 - View submitted problem
 - View prescription
4. Implemented Doctor features:
 - Doctor prescription UI (addPrescription.html)
 - Load appointment details dynamically
 - Save prescription to database
 - Generate PDF receipt using PDFKit
5. Implemented routing:
 - /patients routes
 - /doctors routes
 - /appointments routes
6. Implemented file upload + static serving of images
7. Implemented session + localStorage-based patient navigation
8. Added 'Video Call Coming Soon' placeholder buttons
9. Full end-to-end flow now works:
Patient → Problem Submission → Doctor Prescription → Patient Views Prescription → PDF Receipt
